The coronavirus has highlighted the importance of being proactive with public health. Apart from the coronavirus, the biggest public health challenge of the 21st century is climate change. A healthy environment is fundamental to the health of humans: our health depends on clean air to breathe, clean water to drink, healthy food to eat, and green space to relieve stress. In this week’s Social Impact Challenge we will build awareness, perform an act of service, or change our behavior to honor the health of our environment.

**A**
Take advantage of the reduced pollution and plan a family stargazing night when the sky is clear. Find a news story to spark discussion with your family about how the reduced pollution has impacted the world, and then share back with your team.

**B**
Make a 5 minute playlist to help you take shorter showers to reduce how much water you use. Share your playlist with your teammates.

**C**
Beautify your neighborhood by planting something outside (flowers, vegetables, etc) or picking up trash. Take a picture in action to share with your team.

Measure your carbon footprint and decide on 3 things you and/or family plan will do to reduce your footprint. Share these 3 commitments with your team.
